

# Biodiversity in my backyard.

This is the area!

**Galium aparine (cleavers).**  
herbaceous plant of the family Rubiaceae.

**Moss.**  
It typically forms dense green clumps or mats, often in damp or shady locations.

**Red clover.**  
Native to Europe, Western Asia, and northwest Africa.

**Rumex acetosella.**  
Native to Eurasia and the British Isles, the plant and its subspecies are common perennial weeds.

**Flatweed.**  
Native to Europe, America, Japan, Australia, and New Zealand, where it can be an invasive weed.

# Biodiversity at my backyard

## Slug

They are very important in the circle of life, providing food for all sorts of animals

## Ribwort Plantain

It is very effective at dealing with insect bites and stings.

## White clover

It's an important source of nectar for honeybees

## Dandelion

The circular flower has one of the longest flowering seasons of any plant

## Ground beetle

They are active, primarily terrestrial habitats, and destroy many harmful insects
