MY GARDEN BY EIRINI SKALIDAKI

- here you can see various cultivated vegetables and plants.
- that is, small tomatoes that we see to the right and left of the okra
- in the video we see a shot of the whole garden with plants, fruits and vegetables, to emphasize that the growing season has passed, so we see that the plants are somewhat dry and yet there are still vegetables on them

aubergines

These are pumpkins, here we use them in various dishes, they are the vegetable that Americans use in their local Halloween celebration. 🎃

Their size has been recorded in a local competition reaching 200 kilos.

some peppers of different colors 🌶️

this plant is the so-called okra, its season has passed, i.e. the season when we can collect them so we see very few

- here we see regular sized tomatoes 🍅, which have quite a difference in size from the small ones we call 'ntomatinia' here
- the difference between them. 📺

MY GARDEN BY EIRINI SKALIDAKI

INSECTS

Among all these various vegetables there are of course millions of animals that feed on them or live among them.

- Butterfly 🦋
- Caterpillar 🐛
- Bees 🐝
- earthworms 🪲, which are not pleasant to look at even though they help a lot in the health of the soil so that the plants grow properly and healthy

Also animals that circulate among us in nature.

- Ladybug 🐞
- Ants 🐜
- Snails 🐌, which we cook here in Crete
- Dragonfly 🦋
- Lizard 🦎 otherwise known as 'Samiamidi', it protects the house from various insects as it eats them, for example mosquitoes, flies, cockroaches and many others
